

1M Nickel Plated Strip 8mm x 0.12mm Nickel-Plated for Battery Connection Spot Welding

TECHNICAL SPECIFICATIONS & SUMMARY

[Nickel Strip] Nickel Plated Strip 8mm x 0.12mm for 18650 Battery Pack Spot Welding (1 Meter) High Conductivity - Corrosion Resistant - Ideal for Lithium Battery Pack Assembly The Nickel Plated Strip 8mm x 0.12mm is a high-quality battery connection strip designed for assembling and repairing 18650, 21700, 26650, and 32650 lithium-ion battery packs. Manufactured from premium nickel-plated steel, it offers excellent electrical conductivity, high mechanical strength, and superior corrosion resistance, making it suitable for spot welding and soldering applications. With a width of 8mm and a thickness of 0.12mm, this strip provides reliable current transfer while maintaining flexibility for easy shaping and installation. It is commonly used in DIY battery packs, electric bicycles, power tools, solar energy storage systems, UPS batteries, portable power stations, and other rechargeable battery applications. The strip can be easily spot welded to battery terminals and is also compatible with conventional soldering methods when required. Its low electrical resistance helps minimize
